Cascading cin - Example:

cout >> "Enter two number: ";
cin >> a >> b;

The Figure 9.7 is used to understand the working of Cascading cin statement

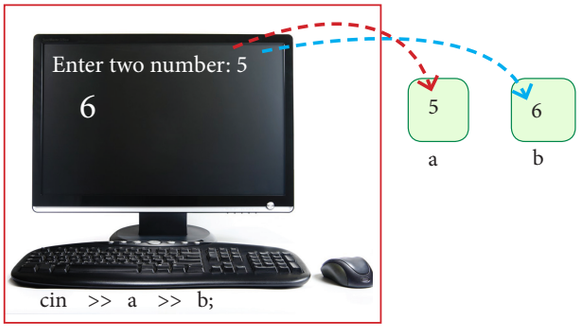

Figure 9.7 Cascading cin

9.5 Sample program – A first look at C++ program

Let us start our first C++ program that prints a string "Welcome to Programming in C++" on the screen.

Sample Prog 9_5.cpp

```
1  // C++ program to print a string
2  #include <iostream>
3  using namespace std;
4  int main()
5  {
6      cout << "Welcome to Programming in C++";
7      return 0;
8  }
```

The above program produces, the following output:

Welcome to Programming in C++

This is very simple C++ program which includes the basic elements that every C++ program has. Let us have a look at these elements:

1	// C++ program to print a string
This is a comment statement. Any statement that begins with // are considered as comments. Compiler does not execute any comment as part of the program and it simply ignores. If we need to write multiple lines of comments, we can use /* ……. */.	
2	**# include <iostream>**
Usually all C++ programs begin with include statements starting with a # (hash / pound). The symbol # is a directive for the preprocessor. That means, these statements are processed before the compilation process begins. **#include <iostream> statement tells the compiler's preprocessor to include the header file "iostream" in the program.** The header file iostream should included in every C++ program to implement input / output functionalities. In simple words, **iostream header file contains the definition of its member objects cin and cout.** If you fail to include iostream in your program, an error message will occur on cin and cout; and we will not be able to get any input or send any output.	
3	**using namespace std;**
The line using namespace std; tells the compiler to use standard namespace. Namespace collects identifiers used for class, object and variables. Namespaces provide a method of preventing name conflicts in large projects. It is a new concept introduced by the ANSI C++ standards committee.
