9.7.2 Working with Dev C++

Among the dozens of IDEs, we take "Dev C++" compiler to create C++ programs. Programming techniques and illustrated programs of this book are based on "Dev C++" compiler.

Dev C++ is an open source, cross platform (alpha version available for Linux), full featured Integrated Development Environment (IDE) distributed with the GNU General Public License for programming in C and C++. It is written in Delphi. It can be downloaded from ***http://www.bloodshed.net/dev/devcpp.html***

1. After installation **Dev C++** icon is available on the desktop. Double click to open IDE. Dev C++ IDE appears as given below.

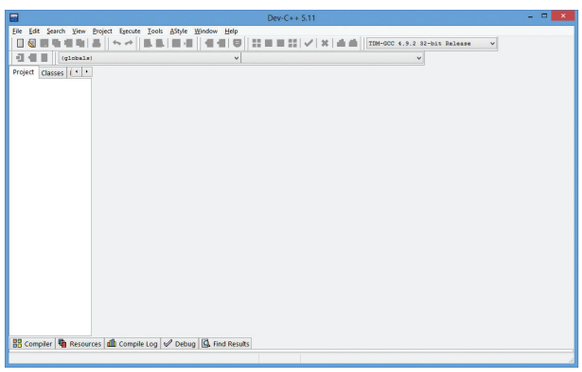

Figure 9.9 Dev C++ opening Window

2. To create a source file, Select **File → New → Source file** or **Press Ctrl + N**.
3. In the screen that appears, type your C++ program, and save the file by clicking **File → Save** or Pressing **Ctrl + S.** It will add .cpp by default at the end of your source code file. No need to type .cpp along with your file name.

4. **After save, Click Execute → Compile and Run or press F11 key.**

   If your program contains any error, it displays the errors under **compile log**. If your program is without any error, the display will appear as follows.
