10.5.4 do-while loop

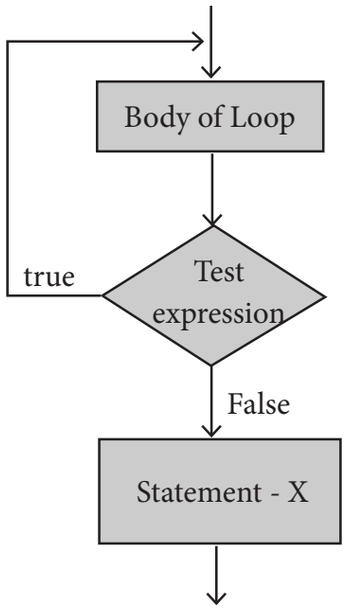
The do-while loop is an exit-controlled loop. In do-while loop, the condition is evaluated at the bottom of the loop after executing the body of the loop. This means that the body of the loop is executed at least once, even when the condition evaluates false during the first iteration.

The do-while loop syntax is:

```
do
{
        Body of the loop;

} while(condition);
```

The flow control and flowchart for do-while loop is shown below



Flowchart 10.8 : do-while loop control flow and flowchart

Illustration 10.12 C++ program to display number from 10 to 1 using do-while loop

```
#include <iostream>
using namespace std;
int main ()
{
int n = 10;
do
{
        cout<<n<<", ";
        n--;
}while (n>0) ;
}
```

Output

10, 9, 8, 7, 6, 5, 4, 3, 2, 1
