The name of the function is **display()**, its return data type is void and it does not have any argument.

Program 11.20

```
#include<iostream>
using namespace std;
void display()
{       cout<<"First C++ Program with Function"; }
int main()
{       display(); // Function calling statement//
        return(0);
}
```

Output :

```
        First C++ Program with Function
```

11.7.2 A Function with return value and without parameter

The name of the function is **display()**, its return type is int and it does not have any argument. The **return** statement returns a value to the calling function and transfers the program control back to the calling statement.

Program 11.21

```
#include<iostream>
using namespace std;
int display()
{
        int a=10, b=5, s;
        s=a+b;
        return s;
}
int main()
{       int m=display();
        cout<<"\nThe Sum="<<m;
        return(0);
}
```

Output :

```
        The Sum=15
```
