Returning Non-integer values

A string can also be returned to a calling statement.

Program 11.24

```
#include<iostream>
#include<string.h>
using namespace std;
char *display()
{       return (“chennai”);   }
int main()
{
        char s[50];
        strcpy(s,display());
        cout<<”\nExample:Function with Non Integer Return”<<s;
        return(0);}
```

Output :

```
Example: Function with Non Integer Return Chennai
```

11.9 Recursive Function

A function that calls itself is known as recursive function. And, this technique is known as recursion.

Example 1: Factorial of a Number Using Recursion

Program 11.25

```
#include <iostream>
using namespace std;
int factorial(int); // Function prototype //
int main()
{
        int no;
        cout<<"\nEnter a number to find its factorial: ";
        cin >> no;
        cout << "\nFactorial of Number " << no <<" = " << factorial(no);
        return 0;
}
int factorial(int m)
{
        if (m > 1)
        {
        return m*factorial(m-1);
        }
        else
        {
        return 1;
}
}
```

Output :

```
Enter a number to find its factorial: 5
Factorial of Number 5 = 120
```
