SECTION - D

Explain in detail

1. What are the rules for operator overloading?

2. Answer the question (i) to (v) after going through the following class.

```
class Book {
int BookCode ; char Bookname[20];float fees;
public:
Book( )                          //Function 1
{ fees=1000;
  BookCode=1;
  strcpy(Bookname,"C++");   }
void display(float C)            //Function 2
{   cout<<BookCode<<":"<<Bookname<<":"<<fees<<endl;   }
~Book( )                         //Function 3
{  cout<<"End of Book Object"<<endl;   }
       Book (intSC,char S[ ],float F)  ;          //Function 4
};
```

(i) In the above program, what are Function 1 and Function 4 combined together referred as?

(ii) Which concept is illustrated by Function3? When is this function called/ invoked?

(iii) What is the use of Function3?

(iv) Write the statements in main to invoke function1 and function2

(v) Write the definition for Function4 .

3. Write the output of the following program

```
include<iostream>
using namespace std;
class Seminar
{ int Time;
public:
Seminar()
 {      Time=30;cout<<"Seminar starts now"<<endl;    }
void Lecture()
{ cout<<"Lectures in the seminar on"<<endl; }
Seminar(int Duration)
{   Time=Duration;cout<<"Welcome to Seminar "<<endl; }
Seminar(Seminar &D)
{   Time=D.Time;cout<<"Recap of Previous Seminar Content "<<endl;}
~Seminar()
```
