Author 10 characters

price float

Totamt float

Define a member function called calculate() to calculate the number of copies and the price and return the total amount.

**Public members**

- A default constructor function to initialize all data members.The book number must be automatically generated staring from 1001
- Readdata() function to accept values for Title,Author and price.Get the number of copies from the user and invoke calculate().
- Display data () function display all the data members in the following format

```
                    ABC PUBLISHERS
                    ~~~~~~~~~~~~~~~~~~
                        INVOICE
                        ~~~~~~~~~
==================================
Book Number         :
Title           :
Author Name         :
Price Per Book:
Total Amount        :
==================================
```

## Coding

```
#include<iostream>
#include<stdlib.h>
using namespace std;
int id=1001;
class Publisher
{
int Bookno;
char Title[20];
char Author [10];
float Price;
float Totamt;
float calculate (int);
public:
Publisher()
```
