| | | | | |
|---|---|---|---|---|
| First Generation Computers - ENIAC , EDVAC , UNIVAC 1<br>ENIAC weighed about 27 tons, size 8 feet × 100 feet × 3 feet and consumed around 150 watts of power | | | | |
| 2 | **Second Generation** | 1956-1964 |  <br>**Transistors** | • Smaller compared to First Generation<br>• Generated Less Heat<br>• Consumed less power compared to first generation<br>• Punched cards were used<br>• First operating system was developed - Bat ch Processing and Multiprogramming Operating System<br>• Machine language as well as Assembly language was used. |
| Second Generation Computers **IBM 1401, IBM 1620, UNIVAC 1108** | | | | |
| 3 | **Third Generation** | 1964 -1971 |  <br>**Integrated Circuits (IC)** | • Computers were smaller, faster and more reliable<br>• Consumed less power<br>• High Level Languages were used |
| Third Generation Computers **IBM 360 series, Honeywell 6000 series** | | | | |
| 4 | **Fourth Generation** | 1971-1980 |  <br>**Microprocessor**<br>Very Large Scale Integrated Circuits (VLSI) | • Smaller and Faster<br>• Microcomputer series such as IBM and APPLE were developed<br>• Portable Computers were introduced. |
| 5 | **Fifth Generation** | 1980 - till date |  <br>**Ultra Large Scale Integration (ULSI)** | • Parallel Processing<br>• Super conductors<br>• Computers size was drastically reduced.<br>• Can recognise Images and Graphics<br>• Introduction of Artificial Intelligence and Expert Systems<br>• Able to solve high complex problems including decision making and logical reasoning |
