Challenge Problems

6. A squirrel wants to eat the grains quickly. Help the Squirrel to find the shortest way to reach the grains. (Use your scale to measure length of the line segments)

7. A room has a door whose measures are 1 m wide and 2 m 50 cm high.
   i. Can we take a bed of 2 m and 20 cm length and 90 cm wide into the room.?
8. A post office functions from 10 a.m to 5.45 p.m with a lunch break of 1 hour. If the post office works for 6 days a week, find the total duration of working hours in a week.
9. Seetha wakes up at 5.20 a.m. She spends 35 minutes to get ready and travels 15 minutes to reach the railway station. If the train departs exactly at 6:00 a.m, will Seetha catch the train?
10. A doctor advised Vairavan to take one tablet every 6 hours once in the 1st day and once every 8 hours on the 2nd and 3rd day. If he starts to take 9.30 a.m first dose. Prepare a time chart to take tablet in railway time.

Summary

- Basic metric units of length is metre, weight is gram and capacity (volume) is litre.
- Different unit measurements should be converted into same unit for addition and subtraction of units.
- **a.m** (ante meridiem) denotes the time that is after 12:00 midnight and before 12:00 noon.
- **p.m** (post meridiem) denotes the time that is after 12:00 noon and before 12:00 midnight.
- To convert 12 hour time to 24 hour time, add 12 to any hours 1p.m to 11p.m and change 12a.m as 00:00 hours
- To convert given time greater than 12 in railway time to an ordinary time, subtract 12 from it.
- Ordinary and Railway time are the same in a.m and it is less than 12.
- In both the formats there is no change in minutes.
- A year which is divisible by 4 is considered as a leap year.
- A century year which is divisible by 400 is a leap year.
