| 4. | Ghee | 40/packet | 5 | 200 |
| | Total | | | 590 |

## 3.3 Profit and Loss

In our day-to-day life, we use many commodities like food, clothes, vehicles, books etc. Everything is produced by someone or by a team of people and sold directly to the people or through the dealers. When we buy anything, a dealer charges more than what the manufacturer charges. Because, the dealer invests some money to buy the goods, spends his time to bring them to his place and he wants to earn a bit more money than his investment. The excess money that the dealer collects from the people is called **gain** or **profit**. If he is in the situation of collecting less money than what he has paid to the manufacturer due to the urgent need of money or some other reason, he loses some money. This losing of money in his investment is called **loss**. This process of buying and selling goods involves either profit or loss. We shall discuss this in detail.
