Try these

1. Check whether the Tree diagrams are equal or not

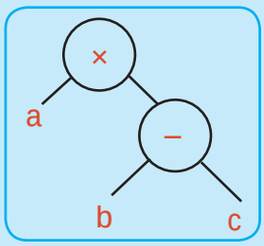

i)

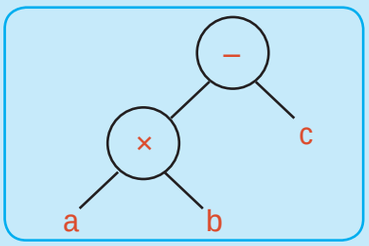

and

ii)

and

2. Check whether the following algebraic expressions are equal or not by using Tree diagrams

i) $(x-y)+z$ and $x-(y+z)$

ii) $(p \times q) \times r$ and $p \times (q \times r)$

iii) $a-(b-c)$ and $(a-b)-c$

Consider the numerical expression 9 – 4. which means 4 is to be subtracted from 9. 9 – 4 can be represented as – 9 4 (so far we have come across with operation in between the operands)

Suppose the expression is 9 – 4 × 2. This can be represented as × – 9 4 2 gives the meaning of

Step 1: × 9 – 4 2

Step 2: (9 – 4) × 2

Take the expression + × – 9 4 2 5

Step 1: + × 9 – 4 2 5

Step 2: + (9 – 4) × 2 5

Step 3: [(9 – 4) × 2] + 5

This is reading an expression from “left to right”. Similarly, we can read expressions from “right to left” also

9 4 2 5 + × – can be read as "right to left" expression which gives the meaning of

9 4 2 5 + × – => (9–4)2 5 + ×

=> (9–4) × 2 5 +

=> [(9–4) × 2] + 5

Hence an expression can be read as “left to right” or “right to left” giving the same answer which is similar to name 4 as Naangu (நான்கு), Four, Nalagu (నాలుగు) and Char(**चार**), all of them representing the collection of four objects. Similarly the numerical expression

[(9 – 4) × 8] ÷ [(8 + 2) × 3] can be written as ÷ × – 9 4 8 × + 8 2 3 (left to right) or 8 9 4 – × 3 8 2 + × ÷ (right to left).

Try these: 1) × – + 9 7 8 2

2) ÷ × + 2 3 8 5
