ACTIVITY - 1

1. Nutraceuticals = _____ + _____.

2. Synbiotic = _____ + _____.

7.2.1 Dietary supplements

A product intended to supplement the diet that bears or contains one or more of the following dietary ingredients:

- a vitamin
- a mineral
- an herb or other botanical
- an amino acid
- a dietary substance used by man to supplement the diet by increasing the total dietary intake or
- a concentrate, metabolite, constituent, extract, or combination of any ingredient described above.

Dietary supplements are further defined as products that are labeled as dietary supplements and are not represented for use as a conventional food or as a sole item of a meal or the diet. Supplements can be marketed for ingestion in a variety of dosage forms including capsule, powder, softgel, gelcap, tablet, liquid, or indeed, any other form. Eg. Multi-vitamin capsules.

7.2.2 Functional foods

Functional foods are fortified or enriched during processing and then marketed as providing some benefit to consumers. Sometimes, additional complementary nutrients are added, such as Vitamin D to milk. Functional foods are "***Ordinary food that has components or ingredients added to give it a specific medical or physiological benefit, other than a purely nutritional effect.***" All functional foods must meet three established requirements: Foods should be

(1) present in their naturally occurring form, rather than a capsule, tablet, or powder

(2) consumed in the diet as often as daily and

(3) should regulate a biological process in hopes of preventing or controlling disease.

7.3 Classification of functional foods

Functional foods are classified in to

a. Probiotic b. Prebiotic

c. Synbiotic d. Phyto chemicals

7.3.1 Probiotic

Probiotic is a greek word which means "for life" It was coined by Lilly and Stilwell in1965. Probiotics are living microorganisms which upon ingestion in sufficient numbers, exert health benefits beyond basic nutrition. Probiotics are a viable microbial dietary supplement which uplifts the health of the host.

7.3.2 Prebiotic

In 1995, Prebiotics was defined by Gibson and Roberfroid as non-digested food components that, through the stimulation of growth and/or activity of a single type or a limited amount of microorganisms residing in the gastrointestinal tract, improve the health condition of a host. Prebiotics may be used as an alternative to probiotics or as an additional support for them. Prebiotics have enormous potential for modifying the gut
