- The simple carbohydrates include monosaccharides (Singlesugar) and disaccharides (Doublesugars).Complex carbohydrates include starch, glycogen and fibers.
- The major monosaccharides are glucose, fructose and galactose.
- The disaccharides of nutritional importance are sucrose, maltose and lactose.
- The complex carbohydrates include starch, dextrin and glycogen.
- The principle function of carbohydrates is to serve as a major source of energy for the body.
- The important sources of carbohydrates in the diets of children and adults are cereals, millets, roots, tubers, pulses, sugar and jaggery, while milk and sugar are important sources in the diets of infants.
- The percentage of calories derived from carbohydrates in diets consumed by a vast majority of people in the developing countries is as high as 60 – 70%.
- Dietary fiber is defined as that portion of plant material ingested in the diet that is resistant to digestion by gastro intestinal secretions.
- The healthiest sources of carbohydrates—unprocessed or minimally processed whole grains, vegetables, fruits and beans—promote good health by delivering vitamins, minerals, fiber and a host of important phytonutrients.
- Energy is the capacity to do work.
- The energy yielding food factors are (i) carbohydrates (ii) fats and (iii) proteins.
- The energy value of foods can be expressed in terms of kilocalories(KCal) or megajoules(MJ).
- Basal Metabolism is the minimum amount of energy needed by the body for maintenance of life when the person is at complete physical and mental rest and having normal body temperature and in the post -absorptive state (12 hours after the intake of last meal).
- Exercise is defined as any movement that makes the muscles work and requires the body to burn calories.
- There are many types of physical activity, including swimming, running, jogging, walking and dancing, to name a few.
- Being active has been shown to have many health benefits, both physically and mentally.

Glossary

Terms	Meaning
Detoxification	It is the physiological or medicinal removal of toxic substances from a living organism, including the human body, which is mainly carried out by the liver.
Hemorrhoids	They are swollen veins in the lowest part of the rectum and anus.
Irritable bowel syndrome(IBS)	It is a group of symptoms—including abdominal pain and changes in the pattern of bowel movements without any evidence of underlying damage.
Lean body mass (LBM)	It is a component of body composition calculated by subtracting body fat weight from total body weight.
Osteoporosis	It is a condition of fragile bone with an increased susceptibility to fracture.
