

World Osteoporosis day
October-20

Fig 11.4: Osteomalacia

bones and teeth. If enough calcium and phosphorus are not deposited in the bones, the bones become weak, bend and deformed. They are unable to support their body weight and therefore become bent under pressure. this condition is known as "Rickets"

Symptoms:

- Bow legs (legs bow outwards).
- Knock knees (legs bow inwards with knees touching each other).
- Enlarged joints (The ends of long bones enlarge), Pigeon's Chest (ribs become hollow and bulge out).
- Teeth become soft and irregular in shape.
- Head becomes abnormally large and with bulging sides.

Symptoms in Adults

Osteomalacia:

1. Adults develope osteomalacia. In this disease, the bones become soft, fragile and easily bendable. They are more prone to multiple fractures.
2. Cramps are common.
3. Spinal cord, thorax, limbs and pelvis may be deformed and back may be hunched. Person may suffer from lower back pain.

Symptoms in Oldage

Osteoporosis: It is a calcium related health problem and occurs frequently in old people. This disease is characterized

Table 11.2: Differences between Osteomalacia and Osteoporosis

S.No	Clinical Features	Osteomalacia	Osteoporosis
1.	Skeletal pain	Persistent	Associated with fracture
2.	Fracture	Occasional	Very common
3.	Fracture healing	Delayed	Normal
4.	Deformity	Common	Absent
5.	Response to Vitamin D treatment	Dramatic	Nil
6.	Urinary calcium	Low	Normal or High
