5.Sauteing:

This method involves cooking in just enough of oil to cover the base of the pan (greasing the pan).The food is tossed occasionally or turned over with a spatula to enable all the pieces to come in contact with the oil and get cooked evenly. Sometimes the pan is covered with lid, reducing the flame and allowing the food to be cooked till tender in its own steam. The product obtained by this method is slightly moist, tender but without any liquid or gravy. Foods cooked by sautéing are generally vegetables used as side dishes in a menu. Eg. poriyels in Indian cuisine.The heat is transferred to the food mainly by conduction.

Advantages

- Takes less time.
- Simple technique.
- Minimum oil is used.

Disadvantage

- Constant attention is needed as there is chance of scorching or burning

Some precautions while frying food

(i) Food should be cut into even sized pieces to ensure even cooking

(ii) The ghee or oil should be heated well and then the flame or heat should be reduced a little

(iii) A few pieces of food should be fried at a time as adding a lot of food may lower the temperature of fat and increase fat absorption

(iv) Fried food should be placed on a clean, absorbent kitchen napkin or brown paper

(v) All the pieces of food should be removed from the oil or ghee to avoid burning of these food pieces and spoiling of the ghee or oil.

6. Frying:

In this method, the food to be cooked is brought into contact with a large amount of hot fat. Frying is of two types namely deep fat frying and shallow fat frying.When food is totally immersed in hot oil, it is called deep fat frying. Samosa, chips, pakoda are examples of deep fat frying. In shallow fat frying, only a little fat is used and the food is turned in order that both the sides turn brown. Eg. Omelets, cutlets, parathas.
