1.7.3 Other Methods of Cooking

I. Microwave Cooking:

Microwaves are electromagnetic waves of radiant energy with wave lengths in the range of 250 x 10^6 to 7.5 x 10^9 Angstroms. It is a comparatively new method of cooking and gradually becoming popular. In this method food is cooked by microwave radiation. Water molecules in the food vibrate rapidly due to microwaves. The heat generated in the process cooks the food.

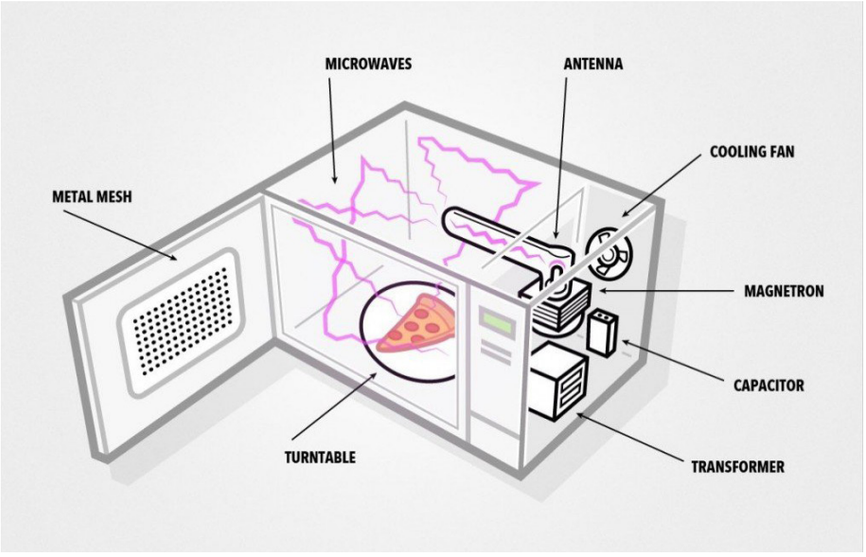

Fig 1.6: Microwave Oven

Advantages:

- It is a quick method of cooking.
- Cooking time is reduced significantly as compared to other methods of cooking.

Disadvantages

- It uses electrical energy and therefore may not be useful in places where continuous electricity supply is not available.
- It may dry up the food products.

Precaution while using a microwave oven: Remember to open a microwave oven a few seconds after it has stopped. This will decrease your exposure to radiation

ACTIVITY - 7

Debate on the pros and cons of olden traditional method of cooking using fire wood and todays modern methods of cooking.
