Germination	It is the process by which an organism grows from a seed or a similar structure. The most common example of germination is the sprouting of the seedling from a seed of an angiosperm or gymnosperm.
Gluten	It is a composite of storage proteins termed as prolanins and glutelins and stored together with starch in the endosperm of various cereal grains. It is found in wheat, barley, rye, oats, etc.
Kilns	It is a furnace or oven for baking or drying something.
Macaroni products	They are the class of food each of which is prepared by drying formed units of dough made from semolina, durum flour or any combination of two.
Malting	It is a controlled germination process which activates the enzymes of the resting grains resulting in the conversion of cereal proteins and other macromolecules. Generally Barley is used in the production of malt.
