CHAPTER 3

PERIMETER AND AREA

E7BH2B

Learning Objectives

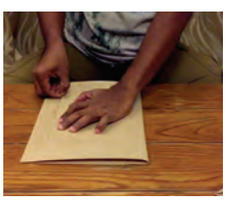

- To understand the concept of perimeter and area of closed shapes.
- To calculate the perimeter and area of square, rectangle, right angled triangle and their combined shapes.
- To understand the usage of units appropriately for area and perimeter.

3.1 Introduction

We come across many situations in our day to day life which deal with shapes, their boundaries and surfaces. For example,

- A fence built around a land.
- Frame of a photograph.
- Calculating the surface of the wall to know the quantity of the paint required.
- Wrapping the textbooks and notebooks with brown sheets.
- Calculating the number of tiles to be laid on the floor.

Some situations need to be handled tactfully and efficiently for the following reasons.

- Using the optimum space to build a dining hall, kitchen, bedroom etc., in constructing a house in the available land and planning of materials required.
- Arranging the things like cot, television, cup-board, table etc., in the proper place within the available space at home.
- Reducing the expenses in all the above activities.

In this context, learning of perimeter and area will be of great importance.
