Think about the situation

Apoorva and her brother return from school. Their mother serves them some biscuits. While they eat them one by one, Apoorva arranges the biscuits on a tray. She finds that the tray can hold only 12 biscuits. If she has to extend spreading the remaining biscuits also in the same manner, she will need a bigger tray in size because, already 12 biscuits occupied the surface of the tray completely. The total length of the visible borders of the tray is said to be the ***perimeter*** and the surface occupied by the biscuits is said to be the ***area*** of the tray. Let us discuss about the perimeter and area in detail in this chapter.

MATHEMATICS ALIVE – PERIMETER AND AREA IN REAL LIFE

Carpenters measure the length of wood required to make a chair

Mason fixing the tiles on the floor.
