Example

(4) Preparation of aldehyde

Ethyl formate reacts with Grignard reagent to form aldehyde. However, with excess of Grignard reagent it forms secondary alcohol.

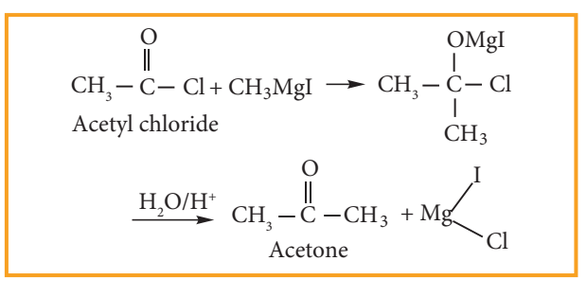

Example

(5) Preparation of ketone

Acid chloride reacts with Grignard reagent to form ketones. However, with excess of Grignard reagent it forms tertiary alcohol.

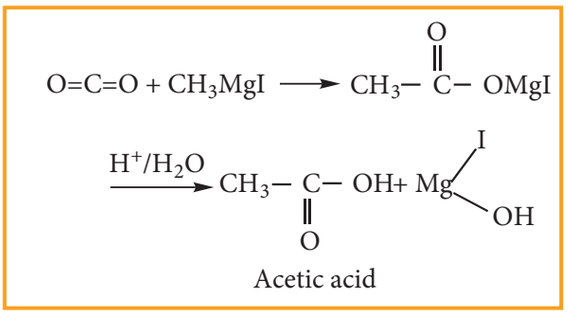

Example

6) Preparation of carboxylic acids

Solid carbon dioxide reacts with Grignard reagent to form addition product which on hydrolysis yields carboxylic acids.

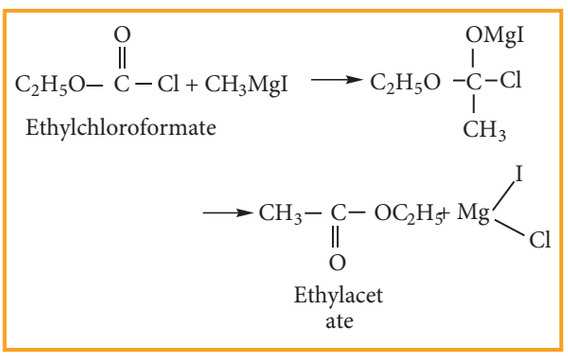

For Example

7) Preparation of esters

Ethylchloroformate reacts with Grignard reagent to form esters.

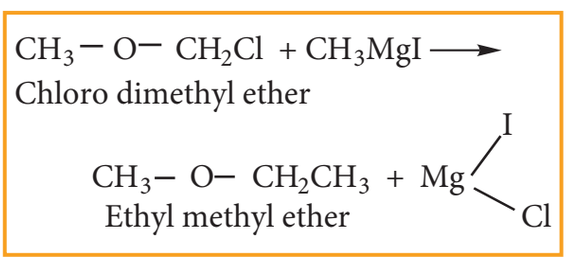

Example

8) Preparation of higher ethers

Lower halogenated ether reacts with Grignard reagent to form higher ethers.

Example

9) Preparation of alkyl cyanide

Grignard reagent reacts with cyanogen chloride to from alkyl cyanide

Example
