5. Two bodies are said to be in the state of thermal_____ if there is no transfer of heat taking place.

## III. True or False. If False, give the correct statement

1. Heat is a kind of energy that flows from a hot body to a cold body.
2. Steam is formed when heat is released from water.
3. Thermal expansion is always a nuisance.
4. Borosilicate glass do not expand much on being heated.
5. The unit of heat and temperature are the same.

## IV. Give reasons for the following

1. An ordinary glass bottle cracks when boiling water is poured into it, but a borosilicate glass bottle does not.
2. The electric wire which sag in summer become straight in winter.
3. Rivet is heated before fixing in hole to join two metal plates.

## V. Match the following

| | | | |
|---|---|---|---|
| 1. | Heat | - | $0^{o}C$ |
| 2. | Temperature | - | $100^{o}C$ |
| 3. | Thermal Equilibrium | - | kelvin |
| 4. | Ice cube | - | No heat flow |
| 5. | Boiling water | - | joule |

## VI. Analogy

1. Heat : Joule :: Temperature : _____
2. ice cube : $0^{o}C$ :: Boiling water :_____
3. Total Kinetic Energy of molecules: Heat :: Average Kinetic Energy : _____

## VII. Give very short answer

1. Make a list of electrical equipments at home which we get heat from.
2. What is temperature?
3. What is thermal expansion?
4. What do you understand by thermal equilibrium?

## VIII. Give short answer

1. What difference do you think heating the solid will make in their molecules ?
2. Distinguish between heat and temperature.

## IX. Answer in detail

1. Explain thermal expansion with suitable examples.

## X. Questions based on Higher Order Thinking Skills

1. When a window is accidentally left open on a winter night, will you feel uncomfortable because the cold is getting in, or because the heat is escaping from the room?
2. Suppose your normal body temperature were lower than what it is. How would the sensation of hot and cold change?
3. If you heat a circular disk with a hole, what change do you expect in the diameter of the hole? Remember that the effect of heating increases the separation between any pair of particles.
