3.1.1 Slow and Fast changes

Activity 2: Look at the pictures and discuss about the duration for the changes to take place.

Slow changes

Changes which take place over a long period of time (hours / days / months / years) are known as slow changes.

Examples: growth of nail and hair, change of seasons, germination of seed.

Fast Changes

Changes which take place within a short period of time (seconds or minutes) are known as fast changes.

Examples: Bursting of balloon, breaking of glass, bursting of fire crackers, burning of paper.

3.1.2 Reversible and Irreversible changes

Reversible change

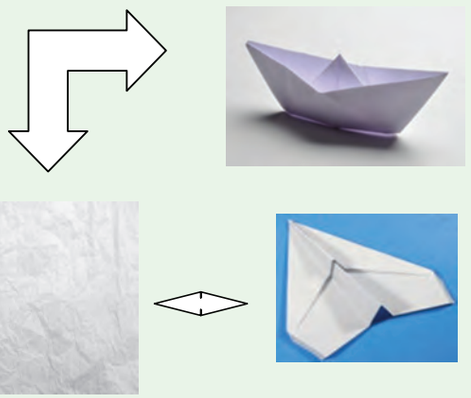

Changes which can be reversed (to get back the original state) are known as reversible changes.

Examples: Touch me not plant (Responding to touch), stretching of rubber band, melting of ice.

Touch me not plant

Activity 3: Try to make a boat and an aeroplane one by one using the same piece of paper. This means the change of shape discussed here is reversible.

Irreversible change

Changes which cannot be reversed or to get back the original state are known as irreversible changes.

Activity 4: What kind of changes are they?

a) Burning of a candle.

_____

b) Piercing a balloon with a pin.
