LEARNING OUTCOMES

Student will capable of

1. **Need of power supply**
2. **Types of AC to DC supply**
3. **Efficiency of power conversion**
4. **Power supply applications**
5. **Conversion of AC to DC, DC to DC AND DC to AC.**

GLOSSARY

S. No	Terms	Explanation
1	Step down transformer	Transformer in which the output AC voltage is less than the input AC voltage
2	Rectification	Process that converts alternating current to direct current
3	Regulator	Device or circuit that maintains a desired output under changing conditions
4	RPS	Abbreviation of Regulated Power Supply. It maintains a constant output voltage under changing load conditions
5	Ripple voltage	The small variation in DC voltage that remains after filtering in a Power supply
6	Filter	Network consisting of capacitors, resistors and inductors used to pass certain frequencies and block others
7	Center tapped transformer	Circuit that make use of a center tapped transformer and two diodes to provide fullwave rectification
8	Full wave Rectifier	Rectifier that makes use of the full AC wave in both the positive and negative half cycles
9	Cycle	When a repeating wave rises from zero to a positive maximum then back to zero and on to a negative maximum and back to zero it is said to have completed one cycle
10	Peak to peak	Difference between the maximum positive and maximum negative values of an AC waveform
