13) The device that does not have gate terminal is ……

a) TRIAC b) FET c) SCR d) DIAC

14) The normal way to turn 'ON' a diac is by .....

a) Gate current b) Gate voltage

c) Break over voltage d) None of the above

15) An IGBT is also known as

a) MOIGT b) COMFET c) GOMFET d) All the above.

PART B

II Answer in few sentences — 3 Marks

1. What are the advantages of LED?
2. How will you display number 9 in seven segment display?
3. Draw the symbol of LDR. Also mention its other names.
4. Differentiate photodiode and phototransistor.
5. What are the disadvantages of LCD?
6. State any three applications of MOSFET.
7. What is DIAC?
8. Draw the symbol of TRIAC. Mention its terminals.
9. Write any three application of TRIAC.
10. What is the function of IGBT?

PART C

III Explain the following questions — 5 Marks

1. Write short notes on seven segment display.
2. Compare LED and LCD.
3. Explain the working principle of solar cell.
4. Compare JFET and MOSFET.
5. Write short notes on IGBT.
