Likewise, we can give only three or four letter words. Because, those days computer was just like three year old child.

Eg: As we use to teach a small child with CAT, RAT, BAT & BALL.

The words which are more than 3 or 4 letters should be abbreviated and used. Keeping so many abbreviations in memory is very tough and more to say abbreviations don't have any meaning also. Hence, this was also very tough for the people to understand and lead to the next generation language.

Third Generation Language

The name of the third generation language is called as **High Level Language** (HLL). In this, we are having:

BASIC, FORTRAN, PASCAL, 'C', PROLOG, ALGOL, PL-I, C++....

Likewise, thousand and odd languages are there.

We have seen, the previous two generation languages were so tough to understand and follow.

What is the development and advantage in third generation?

In this, we can write any type of instruction to the computer just in the form of English like sentence.

Example:
IF AGE >18 ALLOW THE PERSON TO VOTE

If we ask the meaning for the above sentence, any one can say.

No one can believe, if the above sentence is written in computer language. But, this is a typical COBOL language statement. Like this, in all the High Level Languages, we can write any instruction in simple English like sentences.

Now tell me, which generation language is easy?

Certainly the third generation is quite easier than previous two. After the arrival of third generation language many start to learn, interact and extract work from the computer. Further, the development was going on and fourth generation was developed.

Fourth Generation Language

The name of the fourth generation language is Application language or packages. In this, there are so many numbers of languages as given below.

FoxBASE, FoxPro, EXCEL, ACCESS, POWER POINT, MS –WORD …etc.

We have seen that the III generation language itself becomes more easy to use.

Then, what is the added development in fourth generation language?

A question may arise in your mind, why the computer cannot be operated as like a calculator? like addition, subtraction, multiplication and division directly.
