What do you means by this word logic?

For example: Assume that there is a long-standing issue in your area where you are residing. You and your friends decided to find a solution for it. What will be your first step? You start to discuss among with your friends regarding that issue. By the time, everyone will say their idea to find a solution.Among these you can select only one, which is going to be the decision.The following illustration shown in Figure 9.14 simply explains the concept "logic".

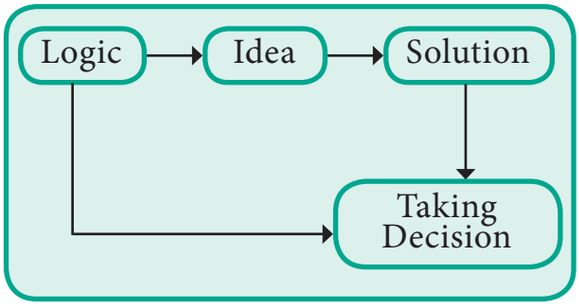

Figure 9.14 Illustration of Logic

With reference to the above example and illustration, Logic is nothing but an idea, idea is nothing but a solution and solution is nothing but taking decision.

Hence, logic is nothing but taking decision.

If so! Whether the computer has decision taking capacity?

If not, there is no use of thinking about all these things.

Logical Capability → Decision taking capacity

How foolish computer be able to take decision? How it possible?

Let us think. In general, while we are taking decision, in how many ways we can able to take decision?

For example:

Assume that your friend is inviting you to come for a movie.

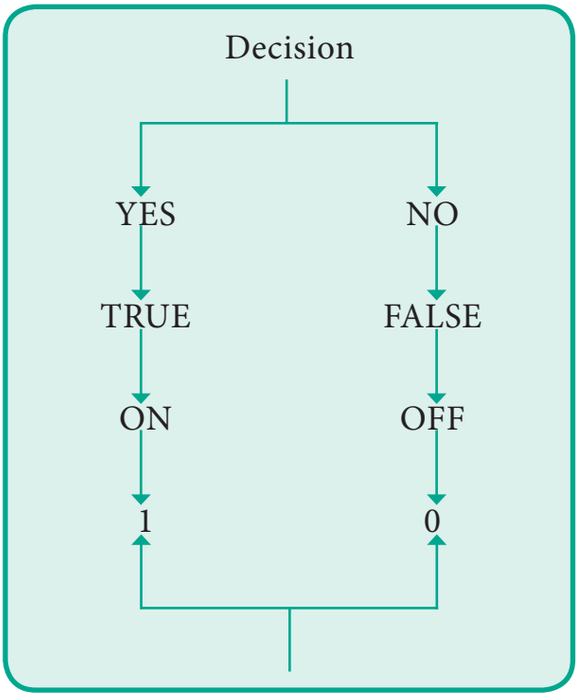

What you will say?

If you intent, you say yes, otherwise, Sorry no.

Is there any other option?

Usually we say, let us see,which is not at all an answer. Because any answer should give finite result.

Hence, for any action there are only two possible answers. i.e., Yes or No

At last where we came? We come to the 1,0, i.e., the machine language.

Till date the computer directly knows only one thing, i.e., the Machine Language
