Measuring DC voltages:

1. Connect the Regulated Power Supply (RPS) with Multimeter as shown in Fig 3.1.
2. Vary the potentiometer in RPS to get three different voltage values.
3. Tabulate the voltage values.

1. Select 250 mA range in multimeter.
2. Connect the Regulated Power Supply (RPS) with Multimeter via an FM radio as shown in Fig 3.2.
3. Vary the DC supply voltage from 6 to 12 volts by varying potentiometer in RPS, to get three different current values.
4. Tabulate the DC current values.
