Testing of Speaker

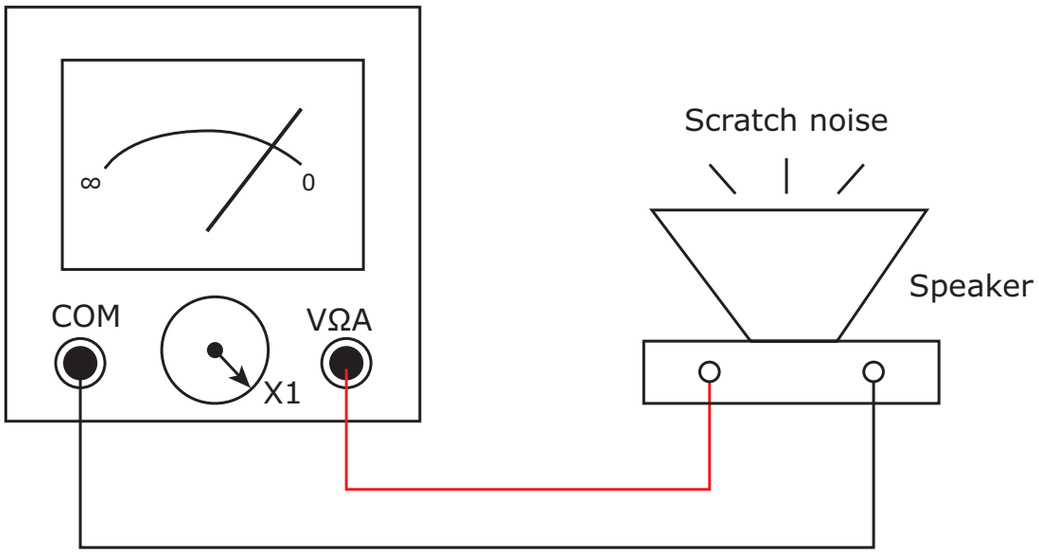

Fig 6.5 Testing of Speaker

1. Select X 1 ohm's range in multimeter.
2. Touch the speaker terminals with meter probes.
3. A scratch noise is heard from the speaker. It denotes that the speaker is in good condition.
4. It no scratch noise is heard from speaker, the speaker may be faulty (open).

S.No	Checking components	Value	Key using in multimeter	Result
1	Electrolyte capacitor	_____MFd		
2	Choke	_____		
3	Transformer primary secondary	 _____ _____		
4	Relay coil N/O N/C	 _____ _____		
5	Speaker	_____		

Result:

The testing of capacitor, inductor, transformer, relay and speaker are studied.
