6. The unit of wavelength is

   a) Micro Farad b) Ampere c) Ohm d) Meter

7. Which of the following is not true?

   a) Current Increases while voltage increases b) Power increases while resistance increases

   c) Current decreases while voltage decreases d) Current increases while resistance decreases

8. The unit of capacitance is

   a) Ampere b) Ohms c) Farad d) Watt

9. When two capacitors are connected in parallel, the total capacitance value is

   a) $C = C_1 + C_2 / C_1 + C_2$ b) $C = C_1 + C_2$

   c) $C = C_1 + C_2 / C_1.C_2$ d) $C = C_1 - C_2$

10. Write the odd one

    a) Ohm b) kilo ohm c) megawatt d) mega ohm

II. Answer in few sentences. Each question carries three marks. (3 marks)

1. Define Ohm's law.
2. Define open-circuit and short-circuit.
3. Draw symbols for i) AC supply ii) DC supply iii) Resistor
4. What is meant by a resistor?
5. What is meant by tolerance in resistors?
6. If 100 Ohms and 150 Ohms are connected in parallel in a circuit , calculate the total resistance of the circuit.
7. If 15 Ohms and 10 Ohms are connected in series with 50Volts, Calculate the current flow in this circuit.
8. Write the expansion for i) NTC ii) PTC iii) PCB
9. Write short notes on i) SMD capacitor and ii) Ultra capacitor
10. State any three advantages of tantalum capacitors.
11. Define capacitive reactance.
12. What is meant by variable capacitor? Draw its symbol.

III. Explain in a paragraph. Each question carries five marks. (5 marks)

1. Draw and explain about wire wound resistors.
2. Draw and explain about carbon resistors.
3. What is meant by Kirchhoff's laws? Explain the same.
4. Draw and explain about electrolytic capacitors.
5. Write any five names of the types of capacitors.
