TRY THESE

Mother had a lot of wooden pieces in different shapes with her. She gave 6 triangles to Kannagi and 6 circles to Madhan and asked them to create different figures using them. They tried and got some interesting figures. Can you create figures like them that are nice and interesting?

Space for new figures

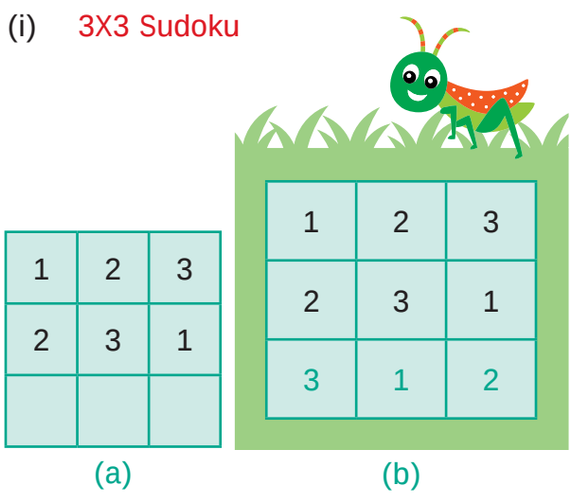

6.3 Systematic completion of lists

Suppose that you are already given a list that is partially filled. How would you complete it? In the activity with 4-digit numbers we had experienced this already. The idea is to find how the filled in part is arranged and use the same idea to complete the rest.

6.3.1 Sudoku

Sudoku is a number game. Completion with some constraints is best enjoyed in Sudoku. This is a puzzle where there is a partially filled in grid. Horizontal lines of cells in the grid are called as rows and vertical lines of cells in the grid are called as columns. In 9x9 Sudoku, you have to fill in the remaining blank cells with numbers from 1 to 9 so that no number repeats in a row, or in a column. In 3x3 Sudoku, you can use only the numbers from 1 to 3. In 4x4 Sudoku, you can use only the numbers from 1 to 4 and so on.

Sudoku

DO YOU KNOW?

The word Sudoku comes from the Japanese language. Su means 'number' and Doku means 'single'. It refers to the condition that each number is listed only once in each row, column. The modern version of this puzzle is said to have come from Howard Garns.
