Number of cups of rice	1	2	3	4	5
Number of cups of water (or) No. of persons	2	4	6	8	10

In all the cases, the number of cups of water (or) the number of persons is 2 times the number of cups of rice. So, we write

Number of cups of rice : Number of cups of water (or) the number of persons = 1 : 2

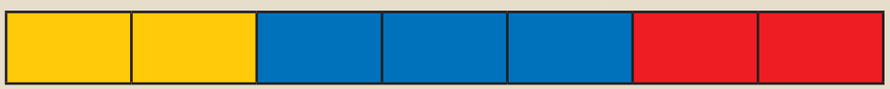

Such comparison is called as a Ratio.

NOTE

- A ratio is a comparison of two quantities with same units.
- If 'a' and 'b' are two different quantities with same unit then, we can write the ratio as a:b (read as a is to b).
- A ratio can be written as a fraction; ratios are mostly written in the simplest form.
- In the above example, the ratio of rice to water in terms of the number of cups can be written in three different ways as 1 : 2 or $\frac{1}{2}$ or 1 to 2 .

TRY THESE

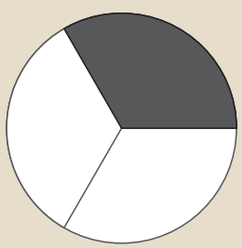

1. Write the ratio of red tiles to blue tiles and yellow tiles to red tiles.

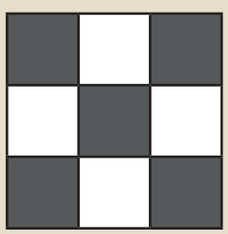

2. Write the ratio of blue tiles to that of red tiles and red tiles to that of total tiles.

3. Write the ratio of shaded portion to the unshaded portions in the following shapes.

Ratio:_____

Ratio:_____

3.2.1 Properties of Ratio

- A ratio has no unit. It is a number. For example, the ratio of 8 k.m. to 4 k.m. is written as 8 : 4 = 2 : 1 and not 2 k.m. : 1 k.m.
- The two quantities in a ratio should be of the *same* unit. The ratio of 4 k.m. to 400 m is expressed as (4 × 1000) : 400 = 4000 : 400 = 10 : 1
