ACTIVITY

This game can be played in small groups. Take 10 or more sticks of equal length. Join them as a bundle and put them on the floor in such a way that they fall one above the other. The challenge is to take one stick after other without disturbing the position of the other sticks.

ACTIVITY

Enjoy trying kolams using line segments!

4.2.3 Two lines

Now let us get back to two lines (Fig. 4.14). Lines that go on forever on either side without meeting each other (i.e. they have a constant distance in between) are called parallel lines.

Fig. 4.14

Thus, parallel lines go forever without meeting.

What will happen if two lines are not parallel?

Then they must meet somewhere! Of course, they go their way after meeting too.

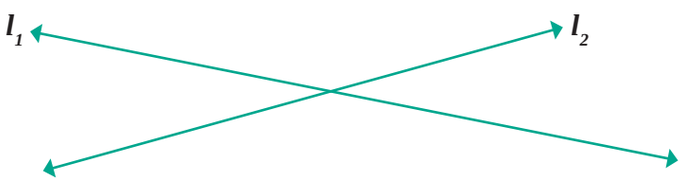

Fig. 4.15

Here, l_1 and l_2 are called intersecting lines.

Of course, we now have parallel line segments and intersecting line segments too.

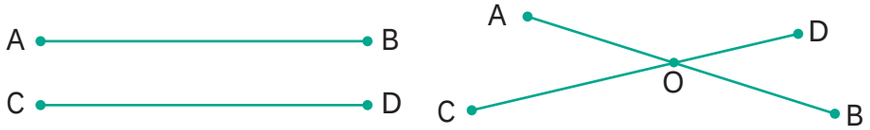

Fig. 4.16

The position 'O' at which the line segments $\overline{AB}$ and $\overline{CD}$ meet is called their point of intersection.
