4.3.7 Using Protractor to draw an Obtuse Angle

Example 4.4

Use a protractor to draw an obtuse angle 120°.

Draw base ray	Draw base ray
	
	
Place the centre of the protractor at the vertex P. Line up the ray $\overrightarrow{PQ}$ with the 0° line. Then draw and label a point (R) at the 120° mark on the inner scale (anti clock wise)	Place the centre of the protractor at the vertex P. Line up the ray $\overrightarrow{PQ}$ with the 0° line. Then draw and label a point (R) at the 120° mark on the outer scale (clock wise)
	
Remove the protractor and draw $\overrightarrow{PR}$ to complete the angle. Now, ∠P = ∠QPR = ∠RPQ =120°	Remove the protractor and draw $\overrightarrow{PR}$ to complete the angle. Now, ∠P = ∠QPR = ∠RPQ =120°

Reflex angles are bigger than 180°. Always subtract the given angle from 360° to get the reflex angle.
