Also, we have studied about related angles such as complementary and supplementary angles in our previous class. Let us recall them.

Complementary angles

Two angles are called Complementary angles if their sum is 90°.

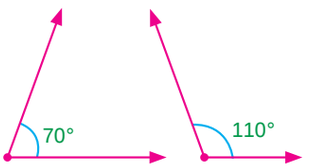

Are the two angles given in the figure complementary? Yes. The pair of angles 35° and 55° are complementary, where the angle 35° is said to be the complement of the other angle 55° and vice versa.

Supplementary angles

Two angles are called Supplementary angles if their sum is 180°.

Observe the sum of measures of the angles 70° and 110° given in the figure is 180°. When two angles are supplementary, each angle is said to be the supplement of the other.

Try these

Choose the correct answer.

1. A straight angle measures

   (a) 45° (b) 90° (c) 180° (d) 100°

2. An angle with measure 128° is called _____ angle.

   (a) a straight (b) an obtuse (c) an acute (d) Right

3. The corner of the A4 paper has

   (a) an acute angle (b) a right angle (c) straight (d) an obtuse angle

4. If a perpendicular line is bisecting the given line, you would have two

   (a) right angles (b) obtuse angles (c) acute angles (d) reflex angles

5. An angle that measure 0° is called _____.

   (a) right angle (b) obtuse angle (c) acute angle (d) zero angle

5.1 Introduction

We are familiar with complementary and supplementary angles. Let us see some more related pairs of angles now.
