9. In the given figure $FG = FI$ and H is midpoint of GI, prove that $\triangle FGH \cong \triangle FHI$

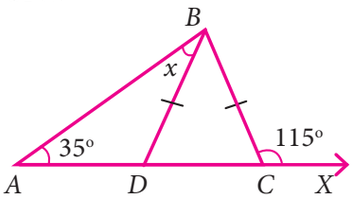

10. Using the given figure, prove that the triangles are congruent. Can you conclude that AC is parallel to DE.

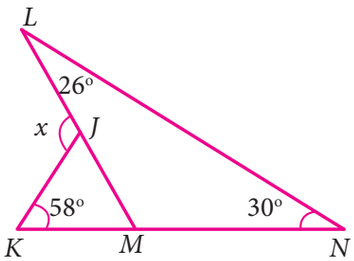

Challenge Problems

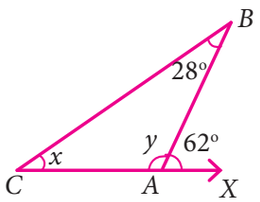

11. In given figure $BD = BC$, find the value of x.

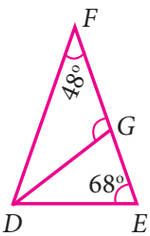

12. In the given figure find the value of x.

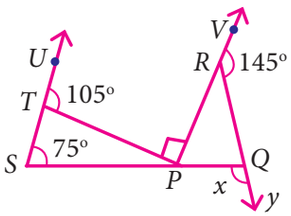

13. In the given figure find the values of x and y.

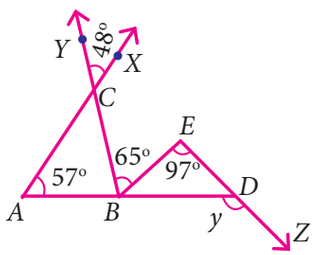

14. In ΔDEF, $\angle F = 48°$, $\angle E = 68°$ and bisector of $\angle D$ meets FE at G. Find $\angle FGD$.

15. In the figure find the value of x.

16. From the given figure find the value of y

Summary

- The sum of three angles in a triangle is $180°$.
- The exterior angle of a triangle is equal to the sum of the two interior opposite angles.
- The exterior angles of a triangle add up to $360°$.
- Two lines segments are congruent if they have the same length.
- Two angles are congruent if the measures of the angles are equal.
