**Contours** are imaginary lines connecting places having same elevation above mean sea level. They are drawn in brown colour.

**Form lines** are like contours representing features that are not actually surveyed. They are shown by broken lines.

**Spot heights** are heights of places surveyed and they denote the actual height above mean sea level. They are shown in maps as dots with their respective values written beside it.

**Bench marks** represent the actual height of a tall structure like a tall building, pillar, bridges or any other object of permanent nature. They are marked with the letters BM with the respective height.

**Trigonometrical Stations** are points included in the triangulation survey and
