Exercise 1

Match the following

10.3 Climatic Diagrams

Climatic diagrams show specific weather element for a specific station for a specific time. Graph, bar charts, combination of graph and bar and wind roses are few climatic diagrams drawn to represent climatic data. Mean monthly temperature of stations can be shown in simple graph. Comparison of maximum, minimum temperature with mean monthly temperature can be done by drawing a multiple graph. Generally rainfall is shown as bar diagram for individual station. Special climatic diagrams combine both bar and graph to show the climatic variations among stations.

Example 1

1. Draw graph to show the average maximum and minimum temperature for Chennai city.

In the x axis,mark the months of the year.
1 cm = one month

In the y axis, mark the temperature after selecting suitable scale considering the lowest and highest temperature of the station. (1 cm = 2 degrees Celsius)

Temperature / Month	Jan	Feb	Mar	Apr	May	Jun	July	Aug	Sep	Oct	Nov	Dec
Maximum Temperature in °C	29.3	30.9	32.9	34.5	37.1	37.0	35.3	34.7	34.2	32.1	29.9	28.9
Minimum Temperature in °C	21.2	22.2	24.2	26.6	28.0	27.5	26.4	25.9	25.6	24.6	23.1	21.9
