

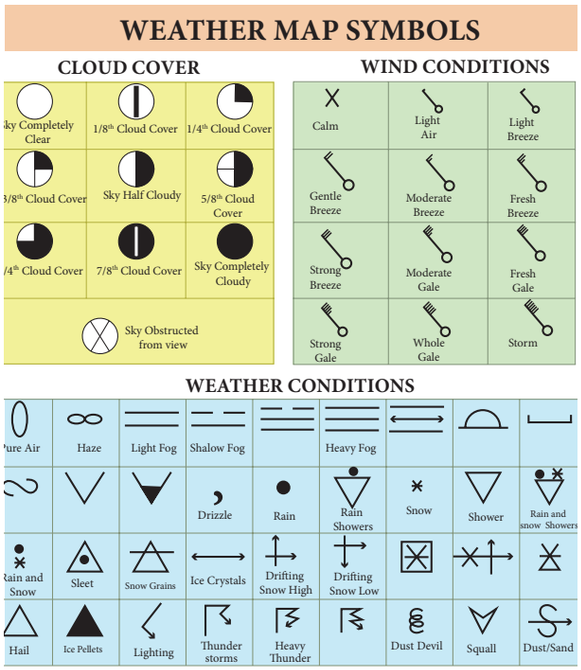

Figure 12.1 Weather Map Symbols

12.5 Station Model

The weather station is the place where all the data about the weather are being recorded, evaluated and documented. Station model is the symbolic drawing of the current weather condition, based on the collected data of weather elements in the particular station. The weather elements observed are shown in symbols in station models.

The value highlighted in the upper left corner is the temperature in degree Celsius. The image portrays the temperature as 12 degrees Celsius. The value highlighted in the lower left corner is the dew point temperature in degrees Celsius. According to the example, the dew point of temperature which is 5 degrees Celsius. The image at the centre refers to cloud cover which is 7/8 cloudy. The value highlighted in the upper right corner represents the last three digits of the sea level pressure or in other words,

Sea Condition

Sl.No.	Weather Elements Sea Condition	Representation of Symbol
1.	Calm	Cm
2.	Smooth	Sm
3.	Slight	Sl
4.	Moderate	Mod
5.	Rough	Ro
6.	Very Rough	V.Ro
7.	High	Hi
8.	Very High	V.Hi
9.	Phenomenal	Ph

Barometric pressure reduced to sea level. The image indicates the sea level pressure as 105 millibars. The symbol extending from cloud cover is the wind barb, that shows wind direction and wind speed (velocity). According to the image, the wind blows from the North East direction to the South West direction at a speed of 15 knots.

12.6 Reading Weather Map

Based on the above flow chart basic weather elements are represented. The following points are to be described while reading the weather map.

Pressure

1. Location of high pressure shown as 'H' in the weather map. The number and location must be specified
2. Location of low pressure, represents as 'L' the number of occurrence, location and nearby isobar value to be noted.
3. Trend of Isobars-The general path of isobars are to be observed.
