6. Weather instruments (for field work related to weather) like thermometer, rain gauge, barometer, wind vane etc.
7. Maps, topographic sheets (non-restricted), satellite images of the study area.

2. Actual Field Work (Method of Information Collection):

When the students reach the local study area, the actual field work begins and information is collected through

1. Observe the features and take notes. Students can record the information through photography and video-audiography.
2. Prepare field sketches by using colour pencils.
3. Instruments can be used for measurement of distances, weather elements, heights, depths etc.
4. Find the direction using magnetic compass and orient the maps and images.
5. By recollecting the map reading practices of topographic maps, satellite images and aerial photographs for recognition and mapping the features.
6. Find the important locations and routes by using GNSS and web based mapping facilities.
7. Collect unique and representative samples of rock, soil, surface water and groundwater for further analysis, class room discussion and exhibition. Do not collect plant, animal or microorganisms from the field, because this activity is banned by the government.
8. Collecting secondary data from local authorities, officers in -charge of the area etc.,

Though field work has many advantages, it also has a few limitations such as:

1. It is time consuming and expensive.
2. It needs necessary equipments, maps, satellite images etc., for proper interpretation.
3. Delay in receiving permission from Government Agencies to visit restricted areas make the trip uncertain.
4. There are certain risks in travelling, changing weather, field illness etc., during field work.

3. Post-Field Work:

The data collected from the field has to be arranged, photographs and sketches added wherever necessary, calculations carried out, results inferred, maps drawn and report of the same prepared.

13.4 Field Report

Writing a report of the work carried on in the field is a documentation of the field work. This helps in systematic reviewing of the work by students who accomplished the task and a reference for future field trips. Field reports must be short, clear and informative with supportive data, maps, sketches, photographs etc.

There are a number of steps involved in report writing. They are:

1. Title:

Identify the topic of investigation which is the purpose of field work. This is the title of the work and it has to be written in bold letters at the top of the report.

2. Introduction:

Every report should start with a brief introduction to the subject under study. It should explain what part of geography
