Cocci in pair		Diplococci e.g. Diplococci pneumoniae
Chain of bacilli (Rod shaped)		Bacilli in chains e.g. Lactobacillus sp
Spirochete (Flexible spiral form)		Corks Screw e.g. Treponema pallidum
Vibrio (Comma shaped)		Comma e.g. Vibrio cholerae

The opposite of antibiotics is probiotics. It favours the growth of beneficial microorganism in the body. e.g. Curd

It kills the harmful bacteria (pathogens).

e.g. Probiotics-**Bifidobacterium, Lactobacillus.**

Bacteria can be divided into two,

1. Beneficial bacteria
2. Harmful bacteria (pathogenic bacteria)

Beneficial bacteria in the body is plays an important role in human survival. Bacteria in the digestive system break down the food substance and produce Vitamin K (**E.coli.**) Beneficial bacteria are also called probiotics. The normal flora are bacteria which are found in or on bodies. The presence may be temporary or permanent basis without causing any disease.

6.3.2 Harmful bacterial infection

Harmful bacteria are called pathogenic bacteria because they cause disease and illness in human and animals.
