Bacterial Infection

BACTERIA	LOCATION	INFECTION
• Streptococcus pneumoniae • Neisseria meningitidis • Haemophilus influenza	Brain (meninges)	meningitis
• Streptococcus Pneumoniae	Ear	Otitis media
• Streptococcus Pneumoniae • Staphylococcus aureus • Mycoplasma pneumonia • Mycobacterium tuberculosis	Lungs(inhalation)	• Lower Respiratory infection – Pneumonia – Tuberculosis • Upper respiratory tract – Sore throat – Sinusitis – Pharyngitis
• Staphylococcus aureus • Streptococcus pyogenes • Pseudomonas aeruginosa	wound	Skin infection – Cellulitis – Abscess – Impetigo
• Escherichia coli • Pseudomonas aeruginosa	Urinary tract	Urinary tract infection – Urithritis
• Salmonella • E.coli • Shigella • Clostridium • Staphylococcus aureus	Ingestion (oral)	Typhoid Travellers diarrhoea Bacillary dysentery Tetanus Food poisoning
• Helicobacter pylori	Stomach	Gastritis(Ulcer)
• Staphylococcus aureus • Neisseria gonorrhoeae • Chlamydia trachomatis	Eyes	Eyes infection Conjunctivitis Trachoma
• Neisseria gonorrhoea • Treponema pallidum • Haemophilus ducreyi	Sexual contact	Sexually transmitted disease Gonorrrhoea Syphilis

Student Activity

Visit - observation of biomedical waste management in nearby hospital

6.3.3 Viruses

Viruses are obligatory intracellular parasites. They multiply by using the host cells. Synthesizing machinery to cause
