

Honey is a natural reservoir for the botulism bacteria. which is cause for food poisoning.

6.8 Bio medical waste management

Introduction: -

All human activities produce waste which may be dangerous and needs safe disposal Industrial waste, Agricultural waste, Sewage waste Pollute water, land and air. It can also be dangerous to human beings and environment. Similarly, hospitals and other health care facilities generate so many wastewhich spread lot of infection. It spread HIV, Hepatitis, Tetanus etc. mostly the health workers who handle in hospital.

India generates around three million tons of Bio medical waste per year and the amount expected to grow at 8% annually.

Bio medical waste is the waste which is generated by hospitals, nursing homes, clinic dispensaries, veterinary institution, animal house, pathological laboratory and blood bank and is not degradable.

Classification of waste: -

1. **General Waste: -**

3. **Shapes: -**
   - a. Hypodermic needles, stitching needles, needles attached with tubing.
   - b. Scalpel blades, razors, nails etc.
   - c. Blood vials, cover slips, edges of slides

Bio medical waste: -

Bio medical waste means any solid or liquid waste including its container and any intermediate product which is generated during the diagnosis, treatment or immunization of human being and animals.

Prompted improvements in medical technology and centralized Medicare brought huge volumes of toxic and hazardous waste.

Situation forced a serious rethinking and necessitated an appropriate refinement in preexisting legislation.
