SUMMARY

Infection control is the discipline concerned with preventing Nosocomial or health care associated infection. It is the practical sub discipline of epidemiology. Practices that control and prevent transmission of infection help to protect patients and workers health from disease.

Knowledge of microbiology is an essential component in nursing for practising this infection sterilization to eliminate pathogenic microbes causing infection disease.

A complete network of specialized cells, tissues, organs that recognize and defend the body from foreign substances. The ability of the host to resist a particular infection or toxin by the action of specific antibodies sensitized white blood cells produced by them in response to natural exposure of the organism is immunity.

Microbial identification is necessary to know the disease and its specific treatment by morphology, resistance, biochemical test, immunological test.

Infection is the invasion or colonization of the body by pathogenic microorganism. The surgical instruments and operation theatres is cleaned by sterilization process and some disinfection agents. if the organism overcome the defense of the host development of the disease follows a certain sequence of steps.

Universal precaution is an approach to infection control to treat all human blood and certain human body fluid (HIV, Hepatitis B). Biomedical waste management is mandatory technique in hospital. Because these waste things may cause so many hazardous to the environment. Segregation of waste from hospital is transport and proper disposable is needed. CSSD as that service within the hospital for the sterile supplies to all departments.

EVALUATION

I. Choose the correct answer

1. What type of immunity can develop by the administration of vaccine?
   a) Artificial passive immunity
   b) Artificial active immunity
   c) Natural active immunity
   d) Natural passive immunity
2. Which is live attenuated type of vaccine ?
   a) DPT b) OPV
   c) BCG d) HepA
3. The organism which most involved in urinary tract infection.
   a) Salmonella b) E.coli
   c) Staphylococcus d) Shigella.
4. Ear infection (otitis media) is caused by
   a) Streptococcus pyogenes
   b) Streptococcus pneumonia
   c) Mycobacterium sps
   d) Salmonella typhi
