This unit contains descriptions basic nursing procedures supplemented by extensive photographic and tabular material.

Linking the skills of professional nursing with the mastery of scientific knowledge of environmental health concepts from interdisciplinary studies is essential to reform the educational process for the health professions. Environmental effects on the health and welfare of individuals, families, and communities are increasingly complex and multifaceted. These effects require integrated knowledge of prevention and amelioration of environmental health consequences in all health professions education.

The most important practical lesson that can be given to nurses is to teach them what to observe—how to observe—what symptoms indicate improvement—what the reverse—which are of importance—which are of none—which are the evidence of neglect—and of what kind of neglect.

8.2 Oxygen Therapy

Definition

Oxygen therapy refers to supplemental oxygen given to people with breathing disorders.

FKN28Z

Methods

- Nasal Cannula method
- Oxygen tent method/Oxyhood method
- Simple mask method
- Venture mask method

Sources

- Oxygen cylinder
- Oxygen wall outlet

Indications

- Shock
- Poisoning
- Trauma
- Anaesthesia
- Cardiac failure
- Respiration failure

8.2.1 Cannula Method

Definition

A method by which oxygen is administered in low concentration through a cannula, which is disposable plastic device with two protruding prongs for insertion into the nostrils.
