8.8.2 Classifications

8.8.3 Effects of Hot and Cold Applications

HOT APPLICATION	COLD APPLICATION
Peripheral vasodilation	Peripheral vasoconstriction
Increased capillary permeability	Decreased capillary permeability
Increased oxygen consumption	Decreased oxygen consumption
Increased local metabolism	Decreased local metabolism
Decreased blood viscosity	Increased blood viscosity
Decreased muscle tone	Increased muscle tone
Increased blood flow	Decreased blood flow
Increased lymph flow	Decreased lymph flow
Increased motility of leucocytes	Decreased motility of leucocytes
