HEAT CRAMPS

Heat cramps, are muscle spasms that result from loss of large amount of salt and water through exercise. This can be caused by inadequate consumption of fluids or electrolytes.

Treating Heat Cramps

Identify when you have a heat cramp

typically due to exercising or working in hot environments.

Stop the activity being performed

Heat cramps are not something you "push through" during exercise. They are your body's way of telling you that it needs a break.

Rest in a cool environment

Find a cooler spot in the shade or indoors and give yourself time to rest and cool down

Drink plenty of fluids

The cramp is a response to dehydration and loss of electrolytes, so you should also drink lots of fluids while you rest. Dissolve a quarter or half teaspoon of regular table salt into one quart of water

Gently stretch the muscles that are cramping.

9.4 Frost Bite

It is a condition in which skin and the tissue below the skin freeze. This is caused due to prolonged exposure to intense cold. Frostbite is often accompanied by hypothermia.

Signs and symptoms

At first, the feeling of prick by "pins-and-needles"

Paleness followed by numbness

A hardening and stiffening of the skin.

A color change to the skin of the affected area.

Management;

a. Very gently remove gloves rings and other constriction.
b. Warm the affected part with your hands.
c. Move the casualty into warm before you thaw the affected part.
d. Place the affected part in warm water
e. Apply a high dressing of fluffed-up, dry gauze bandage.
f. Raise and support the limb to reduce swelling.

9.5 Shock

Shock is a life- threatening condition in which not enough blood is reaching the vital organs in the body as a result of injury or illness.

Causes	Symptoms	Signs
Heart problems, such as a heart attack, or heart failure	weak, rapid pulse	Casuality is anxious and restless
