survival in order to increase the chances of survival of others who are more likely to survive.

Principles of advanced triage is

- "Do the greatest good for the greatest number"
- Preservation of life takes precedence over preservation of limbs.

Advanced Triage Categories

CLASS I (EMERGENT) RED IMMEDIATE

- Victims with serious injuries that are life threatening but has a high probability of survival if they received immediate care.
- They require immediate surgery or other life-saving intervention, and have first priority for surgical teams or transport to advanced facilities; they "cannot wait" but are likely to survive with immediate treatment.

"Critical;lifethreatening—compromised airway, shock, hemorrhage"

CLASS II (URGENT) YELLOW DELAYED

- Victims who are seriously injured and whose life is not immediately threatened; and can delay transport and treatment for 2 hours.
- Their condition is stable for the moment but requires watching by trained persons and frequent re-triage, will need hospital care (and would receive immediate priority care under "normal" circumstances).

"Major illness or injury;—open fracture, chest wound"

CLASS III (NON-URGENT) GREEN MINIMAL

- "Walking wounded," the casualty requires medical attention when all higher priority patients have been evacuated, and may not require monitoring.
- Patients/victims whose care and transport may be delayed 2 hours or more.

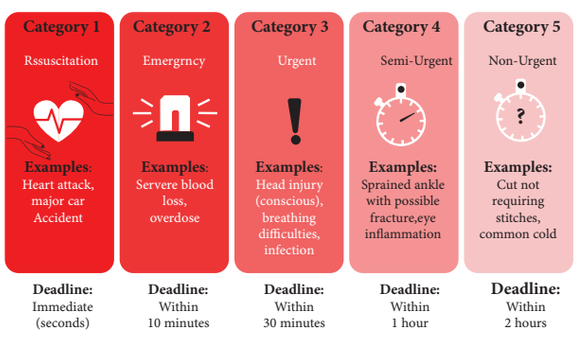

"minor injuries; walking wounded—closed fracture, sprain, strain"

CLASS IV (EXPECTANT) BLACK EXPECTANT

They are so severely injured that they will die of their injuries, possibly in hours or days (large-body burns, severe trauma, lethal radiation dose), or in life-threatening medical crisis that they are unlikely to survive given the care available (cardiac arrest, septic shock, severe head or chest wounds);

They should be taken to a holding area and given painkillers as required to reduce suffering.

"Dead or expected to die—massive head injury, extensive full-thickness burns"
