present their points of view. There are no set speeches, but only informal discussion among the panel speakers.

It is said that the discussion should be spontaneous and natural.

After the subject has been discussed by the panel speakers, the audience is invited to take part. If properly planned and guided, panel discussion can be an effective method of health education.

3. **Symposium:**

A Symposium is a series of speeches on the selected subject by experts. There is no discussion on the subject by the experts. In the end, the audience may raise questions and contribute to the Symposium.

4. **Workshop:**

The Workshop consists of a series of meetings. The total workshop is divided into small groups, and each group will choose a Chairman and a recorder. Each group solves a part of the problem with the help of consultants and resource personnel. Learning takes place in a friendly, happy and democratic atmosphere under expert guidance.

5. **Role Play:**

Role Play or socio-drama is a particularly useful device for putting up problems of human relationship. The group members enact the roles as they have observed or experienced them, e.g. the expectant mother in an antenatal clinic, the public health nurse on a home visit, etc. The size of the group should not be more than 25. Role play is followed by a discussion of the problem.

6. **Demonstrations:**

Practical demonstration is an important technique of the health education. We show people how a particular thing is done – using a tooth-brush, bathing a child, feeding an infant, etc. A demonstration leaves a visual impression in the minds of the people.

Education of the general public (Mass Approach) :

For the education of the general public, we employ "mass media of communication' – Posters, health magazines, films, radio, television, health exhibitions and health museums. Mass media are generally less effective in changing human behaviour than individual or group methods. But however, they are very useful in reaching large numbers of people with whom otherwise there could be no contact. For effective health education mass media should be used in combination with other methods.

Individual Approach

Advantage	Disadvantage
■ Credible	■ Expensive
■ Permit 2 way discussion	■ Time Consuming
■ Can be motivational, influential and supportive	■ Limited Audience
■ Most effective for teaching, caring and helping
