- Subcutaneous (under dermis)
- Intramuscular
- Intravenous
- Intra arterial
- Intra cardiac
- Intra osseous (bone)

III. Topical route:

- Vaginal administration
- Rectal administration
- Inunction (rubbing drug into skin)
- Instillation (placing drug into direct contact with mucous membrane)
- Irrigation (flushing mucous membrane with drug in solution)
- Skin application (Applying transdermal patch)

IV. Inhalation or Pulmonary Route:

- Through nasal, oral, endotracheal or tracheostomy tubes

V. Intraoccular Route:

- Eye medication disk (inserting similar to contact lens)

Students Activity

Visit to a Pharmacy in Government Hospital

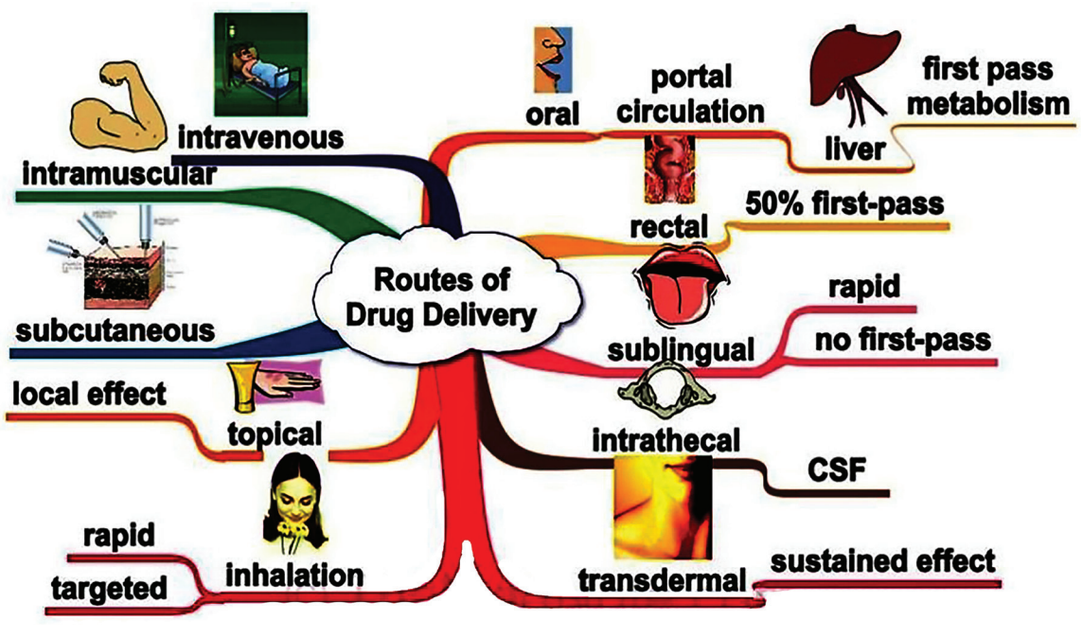

11.11 Pharmacodynamics

It covers all the aspects relating to "what the drug does to the body". It is the study of biochemical and physiological effects of drug and their mechanism of action at organ level as well as cellular level.

11.11.1 Types of Drug Action:

Different types of drug actions are follows:

Stimulation: Some drugs act by increasing the activity of specialised cells, eg., catecholamine stimulate heart to increase heart rate and force of contraction.
