

- **Physiological properties of the drug.** eg., lipid soluble form better absorbed than water soluble.
- **Route of drug administration.** eg., intravenous route directly enters the circulation.
- **Food** eg., milk and milk products decrease the absorption.
- **Presence of other drugs** eg., ascorbic acid increases the absorption of oral iron.
- **Gastrointestinal and other diseases** eg., gastroenteritis decreases drug absorption.

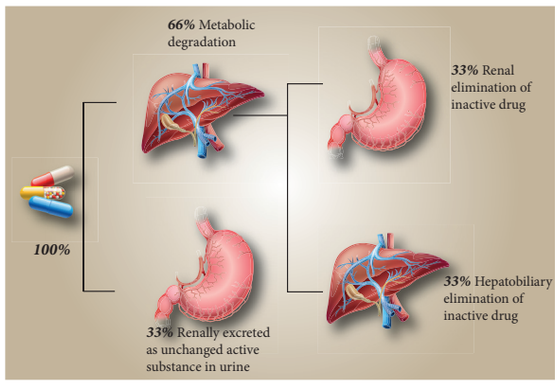

11.13.2 Drug Distribution

Drug distribution: refers to the reversible transfer of a drug between the blood and the extra vascular fluids and tissues of the body (for example, fat, muscle, and brain tissue). Drugs come into the circulation after absorption. From plasma drugs have to cross the capillary membrane to come to interstitial space then it cross the cell membrane and enter into the intracellular fluids.

11.13.3 Drug Metabolism

- Chemical alteration of the drug in a living organism is called drug metabolism or biotransformation.

Site: Liver is the main site for drug metabolism; other sites are GI tract, kidney, lungs, blood, skin and placenta.
